
NetSight® Inventory Manager

- Advanced plug-in application for NetSight
- Provides value-added inventory and change management capabilities, enabling the advanced features of Enterasys hardware
- Offers system-level cataloging of firmware, configurations and hardware—functionality typically not found in device management applications

Data Sheet

- **System-level cataloging of firmware, configurations and hardware**
  - — Retains detailed information about firmware and configuration as well as an inventory in a centralized history log
  - — Organizes firmware by associating it with the supported devices
  - — Applies firmware upgrades to devices simultaneously
  - — Saves device configurations as backup
  - — Inventories Enterasys products by type, serial number, asset tag information, firmware version, etc.
- **Change monitoring and auditing**
  - — Tracks configuration changes made by other applications, third-party management applications or the local console through a unified interface
  - — Audits devices to view the current configuration and compare it with previously saved configurations
- **Task scheduler**
  - — Schedules firmware upgrades, configuration uploads/downloads, device configuration audits, device resetting and hardware account management

System-Level Inventory and Change Management

An advanced plug-in for NetSight, NetSight Inventory Manager is a multidevice management application, which provides system-level firmware, configuration and hardware cataloging information allowing network managers to inventory and change-manage the components and configuration of their Enterasys network. NetSight Inventory Manager enables users to take advantage of the enhanced features of Enterasys hardware and manage all Enterasys infrastructure components cohesively as a system, as well as maintain an organized central database for data collection and historic information reporting.

Configuration tracking is accomplished by combining the configuration save/restore feature of Enterasys network devices with the control-like change management built into NetSight Inventory Manager. With this unique change-tracking philosophy, Inventory Manager can track configuration changes made by other NetSight applications, third-party management applications, or the local console (CLI) connection through a single unified interface. In addition, Inventory Manager can track the addition, removal and movement of chassis modules and the daughter cards installed within them. It records unique device identifiers, and detects, tracks and reports swapping of hardware modules and IP addresses during network upgrades, reconfigurations and troubleshooting events.

Implementation of NetSight Inventory Manager requires deployment of NetSight Console as the central component for infrastructure view synchronization, information sharing and preferences configuration. NetSight and NetSight advanced plug-in applications have been designed for use on Windows XP/2000/2003, Linux or Solaris operating systems.

NetSight Inventory Manager is part of the NetSight enterprise-class network management system that provides command and control of a Secure Network infrastructure.

System Requirements

Operating Systems

Windows XP, Windows 2000, Windows 2003 server

Solaris 2.8 & 2.9

Recommended: Ultra 30/60 Ultra Sparc IIIi processor, 1 GB RAM, 600 MB free disk space

Linux: RedHat Linux Enterprise ES, WS; SUSE Linux

Server Requirements

Server Recommended: P4 3 GHz processor, 1 Gig RAM, 600 MB free disk space

Client Requirements

Client Recommended: P3, 1 GHz processor, 512 RAM, 300 MB free disk space

Ordering Information

NetSight Inventory Manager (select one of the following)

IM-SE-LIC
NetSight Inventory Manager, Small Enterprise

IM-ME-LIC
NetSight Inventory Manager, Medium Enterprise

IM-LE-LIC
NetSight Inventory Manager, Large Enterprise

IM-U-LIC
NetSight Inventory Manager, Unlimited

Required Software (select one of the following)

NetSight Console

NSA-SE-LIC
NetSight Console, Small Enterprise

NSA-ME-LIC
NetSight Console, Medium Enterprise

NSA-LE-LIC
NetSight Console, Large Enterprise

NSA-U-LIC
NetSight Console, Unlimited

Optional NetSight Products

NSA-IM-CD
NetSight Inventory Manager CD

NSA-CD
NetSight Console CD

Ordering Information (continued)

NetSight Policy Manager

NSA-PM-CD
NetSight Policy Manager CD

NSA-PM-LIC
NetSight Policy Manager single software license key for use with one copy of the software

NSA-PM-10D
NetSight Policy Manager limited license key (10-device support)

NetSight Router Services Manager

NSA-RSM-CD
NetSight Router Services Manager CD

NSA-RSM-LIC
NetSight Router Services Manager single software license key for use with one copy of the software

NSA-RSM-10D
NetSight Router Services Manager limited license key (10-device support)

NetSight Automated Security Manager

NSA-ASM-CD
NetSight Automated Security Manager CD

ASM-SE-LIC
NetSight Automated Security Manager, Small Enterprise

ASM-ME-LIC
NetSight Automated Security Manager, Medium Enterprise

ASM-LE-LIC
NetSight Automated Security Manager, Large Enterprise

ASM-U-LIC
NetSight Automated Security Manager, Unlimited

Note: NetSight Tiering Scheme
NetSight tiers break down as follows:

Small Enterprise (SE): ≤ 10 Devices
Medium Enterprise (ME): ≤ 250 Devices
Large Enterprise (LE): ≤ 600 Devices
Unlimited Enterprise (U): 600+ Devices

("End stations" represent the number of protected workstations, servers, printers, etc. on the network.)

Warranty

As a customer-centric company, Enterasys is committed to providing the best possible workmanship and design in our product set. The NetSight product family includes a ninety (90) day warranty that covers defects in media only.

Service and Support

SupportNet—a suite of innovative and flexible service and support offerings—completes the Enterasys solution. SupportNet offers all the post-implementation support services you need—online, onsite or over the phone—to maintain your network availability and performance.
